

## Locating cylinder Ball Lock

### Item description/product images

### Description

**Material:**

Locating cylinder carbon steel.

Balls roller bearing steel.

**Version:**

Locating cylinder tempered, black oxidised.

Balls hardened, bright.

**Note:**

By tightening the thrust screw (D2) the centre ball is pressed downwards and in turn forces the three locking balls outwards, where they locked in the receiver bush. With this easy to use system machine set-up times are up to twelve times shorter than when conventional methods are used.
