

Locating cylinder with quick clamping system

Item description/product images

Description

Material:

Locating cylinder carbon steel.

Balls roller bearing steel.

Version:

Locating cylinder tempered, black oxidised.

Balls hardened, bright.

Note:

Locating cylinder with quick-clamp system for extra timesaving during setups.

Insert the locating cylinder into the receiving hole and press the button. The three balls are pushed out and position the components. By tightening the set screw a 1/4 turn using an hexagonal key, the components are positively and securely held.
